With everything that has happened over the years at the San Jacinto River Waste Pits, it is beyond time for the EPA to hold these companies accountable for their actions. I firmly support the Army Corps of Engineers finding that the safest, most rapid solution is placing a permanent cap on the waste pits. We do not need to risk another environmental catastrophe with trucks transporting toxic waste or flooding the site during a dig-and-haul and releasing the toxins downstream.

Please consider all of us in East Harris County and make the safest decision now!

SINCERELY,

(b) (6)
